EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Peter Sachtjen on 12/05/2005.

The following changes to the drawings have been approved by the examiner and agreed upon by applicant: The figures have been changed to depict connector 22 as described in the specification. In order to avoid abandonment of the application, applicant must make these above agreed upon drawing changes.

Reasons for Allowance

1. The following is an examiner's statement of reasons for allowance: None of the prior art of record alone or in combination teaches or fairly suggest applicant's claimed invention for the following examiner's reason for allowance. The prior art of record most similar to applicant's invention is taught by Patz et al. Patz et al discloses "a suspended lighting assembly including a light fixture 27 attached by chain links 26 to a mount assembly on a ceiling C and including a first power cord 41 for connecting light means 37 on the fixture to an electrical source at the ceiling, said system facilitating the servicing the light fixture at a lowered suspended height." Patz et al, nor any of the other prior art of record teaches the above limitation further including "**a connector**

member in said first power cord including a socket member and a plug member operatively coupled in an mounted condition and uncoupled at a service condition, an elongated second power cord operatively coupled with said plug member and said socket member of said connector member in said service condition, a releasable link in said chain links, said releasable link being engaged between adjacent links in said mounted condition, and disengaged from said adjacent links in said service condition, an adjustable length tether assembly having a first end connected in said service condition to said chain links above said releasable link, and a second end operatively connected in said service condition to said light fixture and supporting said light fixture in said service position at a suspended height for maintenance and repair thereof.”

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Olier Jr. '502 and '41, MacLewee, Childs, Muller et al disclose light fixtures which are similar to applicant's invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
